1 Track presentation

The presentation of radar and flight plan tracks consists of the following elements:

- Aircraft position symbol
- History dots
- Prediction line
- Track label, joined to the position symbol with a leader line

1.1 Colors

Most of the track presentation coloring depends on the flight sector state. The states are as follows:

	Sector state name	Color name	Condition
-	Unconcerned	"Unconcerned"	Track will not enter the active sector
-	Notified	"Concerned"	Track will enter the active sector (> 15 min)
-	Coordinated	"Coordination"	Track will enter the active sector (< 15 min)
-	Assumed	"Assumed"	Track is assumed
-	Transfer Initiated	"Assumed"	Track is being transferred to the next controller
-	Redundant	"Redundant"	Track has been transferred to the next controller
			but is still inside the active sector

An unconcerned track can be highlighted based on rules (a combination of departure airport, route and arrival airport) defined in plugin data files. In this case it is drawn with "Informed" color.

Many track label fields have specific coloring rules to indicate various events. Refer to Label fields description for these. For the color definitions, refer to Colors.

1.2 Aircraft position symbol

The position symbol is drawn at the latest known position of the aircraft. The color of the symbol is the flight sector color for an unselected track and "Track Highlight" for a selected one. A number of different symbols are available. To begin with, there are six basic shapes that tell what kind of track is in question:

- ➤ Flight plan track (position is not based on surveillance data but calculated by EuroScope)
 Coasted track (no position updates in over 30 seconds, position no longer reliable)
 → Primary radar track
 ♦ Secondary radar track without Downlink Aircraft Parameters (DAPs)
- Secondary radar track with Downlink Aircraft Parameters (DAPs)

An indication of an SPI (transponder ident) can be added to the last three symbols. It draws a cross over the symbol and prints the text "SPI" above and to the right of the symbol:

Secondary radar track without DAPs with Special Position Indication

For the last four symbols, a divergence alert will be drawn in case of a RAM or CLAM alert. This is a circle drawn around the symbol (will not be drawn if SPI is active):

Secondary radar track without DAPs with divergence alert

1.3 History dots

The history dots show the previous positions of the track. The number of displayed dots can be changed via the Track Control Window. The color of the dots is the flight sector color for an unselected track and "Track Highlight" for a selected one. History dots are not displayed for flight plan tracks.

1.4 Prediction line

The prediction line draws the predicted ground track of the aircraft, based on its current track and ground speed. It is a two color line, starting with "Track Highlight" for a selected track and "Track Default" for an unselected track at the position symbol and then alternating with the flight sector color, with every segment representing one minute of flying time. The length of the prediction line can be changed for all tracks via the Track Control Window, or for a single track via the PRL menu. The example below shows a selected track with 5 history dots and a 3-minute prediction line. Prediction lines are not displayed for flight plan tracks.

1.5 Track label

There are four types of track labels that can be displayed: *Standard, Reduced, Extended* and *Uncorrelated*. In addition, each label except the extended one has an *unselected* and a *selected* state, the *selected* state being shown when the mouse cursor is over the label.

Basically, the *Standard* label is shown for aircraft that are in or will enter the active sector and the *Reduced* label for aircraft that will not enter the active sector. The *Extended* label can be opened from the *Standard* or *Reduced* label and stays open as long as the cursor is within the label area. The *Uncorrelated* label is shown for radar tracks that aren't correlated with a flight plan.

The following descriptions show the positions of the data fields in the different labels of the set that is provided with the plugin and the available mouse click areas. The contents and any special coloring rules for the data fields are explained in <u>Label fields description</u>. Note that an uncorrelated primary radar track will not show a label at all.

Data fields in grey color can be selected globally on/off via the Track Control Window, or for some of them, for individual tracks via the selected or *Extended* track label. In case of the CFL/PEL field, only the PEL display can be selected off. For the COPN/COPX field, only the COPX display can be selected off. Data fields in parentheses are blank (instead of displaying the field name) when there is no data.

2.4 Flight Plan List

Data field	Left-click action	Right-click action
Callsign	Open Callsign menu	
ASSR	Open ASSR menu	Send CPDLC "Squawk SSR" message
N/ATYP		
ADEP		
ETD	Open FP track status popup	
ADES	Open Flight Plan Window	Open ES flight plan dialog
RFL	Open RFL menu	Toggle flight leg display
ETA	Open estimate popup	
SI	Open next controller popup list	
STS	Open FP track status popup	

3 Label fields description

Treatment of fields with no data

In the unselected track labels, a data field that contains no data will be blank. An exception to this is the AFL field which will display "AFL" when no altitude data is available for the track. In the selected and extended track labels a field with no data will still be displayed, usually displaying the field name (for example "AHDG"). Exceptions to this are all fields on line 0 and other fields as specified in the label definitions. In flight lists, the display of a field with no data depends on the specific field.

Active and inactive indicators

Some of the indicator characters in line 0 of the track label have active and inactive states. In the inactive state the indicator is not shown on the unselected label, and on the selected and extended labels it is shown after the other indicators and in the normal flight sector color. For example when clicking the Inbound clearance indicator, it changes to inactive state. Clicking the inactive indicator in the selected or extended label will restore it to active state.

Data fields description and coloring

The table below describes the data fields used in the labels and flight lists and their coloring rules, if different from the normal flight sector colors.

Data field	Description	Comments	Color
•	Frequency	"•", set from Callsign menu	
•	Mark	"•", set from Callsign menu	Warning
	Field 18 information	" ■ " if "RMK/" or "STS/"	
		found in FPL remarks field	
Α	Manual alerts	"A" if Manual alert(s) active	Warning
а	Attitude indicator	Climbing: up arrow	
		Descending: down arrow	
		Level flight or unknown: blank	
accFL	Planned Entry Level	If logged in as CTR and flight not	Ongoing coordination:
	or	inside active sector, displays PEL.	Proposition
	Exit Flight Level	Otherwise displays XFL.	Coordination refused:
			Warning
		"CA" if Clear for App set,	
		"VA" if Visual App flag set,	
		See AFL field for number format.	
ADEP	Departure aerodrome	ICAO code, 4 characters	
ADES	Destination aerodrome	ICAO code, 4 characters	

Data field	Description	Comments	Color
AFL	Actual Flight Level	Nautical: FL's with 3 digits, altitudes "A"+ 3 digits, heights "E"+ 3 digits, in hundreds of feet Metric: FL's with 4 digits, altitudes "M"+ 4 digits, heights "E"+ 4 digits, in tens of meters	When the value has been set manually: Warning
AHDG	Assigned heading	Flight List - Assigned heading ("H" + 3 digits) or direct point name Unselected label: - Assigned heading ("H" + 3 digits) or direct point name - Next point on the route Selected label: - Assigned heading ("H" + 3 digits) or direct point name - SID name if last point not yet overflown - STAR name if next route point belongs to the STAR - Next point on the route If a heading clearance or request is in progress via CPDLC, displays "[heading]", followed by "+" if the request or answer contains a reason (i.e. DUE TO something).	Track label: If a value is assigned and HOP: Proposition If a tactical coordination value is accepted but not set: Information If a CPDLC uplink message has been sent: CPDLC UM Clearance If a CPDLC downlink message has been received: CPDLC DM Request If controller timeout has expired following a CPDLC downlink request: CPDLC Controller Late If a CPDLC warning has been raised: color of the warning
ALRT	Alert message	"MSAW", "APW", "AIW", "CLAM", "RAM", "MTCD" or "DUPE" (in this priority order)	MSAW, APW, AIW and MTCD: Warning
ARC	Assigned vertical rate	Nautical: "R" + 2 digits, in 100's of ft/min, max "R99" Metric: "R" + 2 digits, in m/s, max "R99"	If a value is assigned and HOP: Proposition If a tactical coordination value is accepted but not set: Information

Data field	Description	Comments	Color
ASP	Assigned speed	Mach "M"+ 3 digits, in 1/100's of Ma, max "M999" Nautical:	If a value is assigned and HOP: Proposition
		Speed "N"+ 3 digits, in knots, max "N999" Metric: Speed "K"+ 3 digits, in km/h,	If a tactical coordination value is accepted but not set: Information
		max "K999"	If a CPDLC uplink message has been sent:
		If a speed clearance or request is in progress via CPDLC, displays	CPDLC UM Clearance
		"[speed]", followed by "+" if the request or answer contains a reason (i.e. DUE TO something).	If a CPDLC downlink message has been received: CPDLC DM Request
			If controller timeout has expired following a CPDLC downlink request: CPDLC Controller Late
			If a CPDLC warning has been raised: color of the warning
ASSR	Assigned mode 3/A code	"A" + 4 digits. If no code assigned, shows TSSR code if available	If different than TSSR: Warning
		If a SQUAWK SSR message is in progress via CPDLC, displays the code in brackets, followed by "+" of the answer contains a reason (i.e.	If a CPDLC uplink message has been sent: CPDLC UM Clearance
		DUE TO something).	If a CPDLC warning has been raised: color of the warning
С	Inbound clearance	"C" if ADES is one of the defined airports -> aircraft needs inbound clearance	Active state: Warning
CALLSIGN	Callsign	If more than one aircraft, suffixed by "+". If correlated to a primary track or to a secondary track with no ASSR code and a non-discrete TSSR code, suffixed by "*".	Priority order: STCA alert: Urgency HOP in: Proposition Highlight: Warning
		If the flight is CPDLC connected, the callsign is displayed in brackets.	If none of the above: Transfer in: Assumed Transfer out: Redundant

Data field	Description	Comments	Color
CFL	Cleared Flight Level	"CA" if Clear for App flag set, "VA" if Visual App flag set, See AFL field for number format. Unselected label:	Departure list: for CTR or FSS if CFL > PEL, for others if CFL > XFL: Warning
		Not shown if equal to AFL ("CFL" option in Track Control Window prevents this hiding)	If a CPDLC uplink message has been sent: CPDLC UM Clearance
		If a level clearance is in progress via CPDLC, displays "[level]", followed by "+" if the answer contains a reason (i.e. DUE TO something).	If a CPDLC warning has been raised: color of the warning
CFL/PEL	Cleared Flight Level or Planned Entry Level	PEL is shown for flights in "coordinated" and "ongoing coordination" states, CFL otherwise. "CA" if Clear for App flag set, "VA" if Visual App flag set, See AFL field for number format.	PEL: Ongoing coordination: Proposition Change just before ETN: Info Coord Coordination refused: Warning
		Unselected label: PEL: Not shown if equal to AFL and no ongoing coordination. CFL: Not shown if equal to AFL ("CFL" option in Track Control Window prevents this hiding)	CFL: If a CPDLC uplink message has been sent: CPDLC UM Clearance
		If a level clearance is in progress via CPDLC, displays "[level]", followed by "+" if the answer contains a reason (i.e. DUE TO something).	If a CPDLC downlink message has been received: CPDLC DM Request
			If a CPDLC warning has been raised: color of the warning
CLR	Clearance received flag	Filled rectangle if clearance received Empty rectangle if not Blinking rectangle if aircraft has requested clearance via CPDLC	Blinking rectangle: When request contains free text: Urgency Otherwise: Warning
СОМ	Communication type	"r" if voice receive only "t" if text only	Warning
COMP_CS	ICAO RTF callsign	The decoded ICAO RTF callsign	
COORD	Coordination message	"ROF" if a Request On Frequency message has been received from the next sector	Coordination
		The last changed tactical coordination parameter value (AHDG, ASP or ARC)	Proposed: Proposition Rejected: Warning

Data field	Description	Comments	Color
COPN	Entry point	A holding clearance is displayed if	Ongoing coordination:
		there is no coordination. It shows	Proposition
		the holding point name + "H" or for	Coordination refused:
		lat/lon point holdings, "POS H".	Warning
		For a TSA Hold clearance, the area	
		name is shown.	
COPX	Exit point	See COPN	Ongoing coordination:
			Proposition
		Departure list:	Coordination refused:
		If logged in as CTR and flight not	Warning
		inside active sector, displays COPN	
COPN/COPX	Entry point or Exit point	COPN is shown for flights in	Ongoing coordination:
		"coordinated" and "ongoing	Proposition
		coordination" states, COPX in	Coordination refused:
		"assumed", "transfer initiated" and	Warning
		"redundant" phases.	
		For more information see COPN.

		Coordinate manually (using text	plugin color "Warning")	
		messages, interphone, etc.) and		
		then click the symbol to accept the		
		coordination values.		
TIME	Estimated Off Block Time	UTC time in "HHMM" format		
TRACK	True track	"T" + the aircraft's current ground		
		track in degrees true		

Data field	Description	Comments	Color
TSSR	Aircraft transponded mode 3/A code	"A"+ 4 digits	
V	Flight rules	"V" if VFR, "Y" if first IFR and later VFR, "Z" if first VFR and later IFR	
W	No RVSM capability	"W" if aircraft equipment is not indicating RVSM capability	Not approved: Urgency Exempt: Information Unknown: Unknown
WTC	Wake turbulence category	"J" for Super, "H" for Heavy, "M" for Medium, "L" for Light	
/WTC	Wake turbulence category	"/J" for Super, "/H" for Heavy, "/M" for Medium, "/L" for Light	
XFL	Exit Flight Level	"CA" if Clear for App set, "VA" if Visual App flag set, See AFL field for number format. Unselected label: Not shown if equal to CFL/PEL and no ongoing coordination. ("XFL" option in Track Control Window prevents this hiding)	Ongoing coordination: Proposition Coordination refused: Warning
Υ	No 8.33kHz capability	"Y" if aircraft equipment is not indicating 8.33kHz capability	Not approved: Urgency Exempt: Information Unknown: Unknown

4 Colors

The following table shows the plugin defined colors (and where applicable, their EuroScope counterparts, which should be set the same for best results). The Usage column indicates where the colors are used (the list may not be complete). In the aircraft colors "Labels" means track labels and any lists where aircraft information is displayed, "Tracks" radar position symbols, history dots, prediction lines and divergence symbols.

All the EuroScope colors in the table can be found in the *Datablock* group in the *Symbology* dialog except the active and inactive sector backgrounds which are in the *Sector* group.
